

Homework6

Design and use of friendly and nested classes using the C ++ programming language.

April 2021, Draghici Andreea, CR 2.1B

1 Task:

Develop a module for operations with lists of integers. function The main (main) will use this module, displaying a menu to perform the following operations: add an item to the list, delete an item from the list, the removal from the list of items that have a value less than a given value, calculation of the arithmetic mean of the items in the list, display of the list, as well as exiting the menu. For the classes that refer to the list, respectively node the notions of friendly classes and nested classes will be used.
